

NFC Garage Opener — ESP32 to LiftMaster Remote Wiring

Notes:

- (1) ESP32 GND and remote GND are physically tied together — the only shared connection between the two boards. The remote keeps its own coin cell.
- (2) Button 3's pad has 4 SMT pins (2 GNDs and 2 LOADs). One pin of each is soldered to leads; the other two are unused. Buttons 1 and 2 are untouched.
